Faecal Seeding

Faecal Seeding is a unique technique that could be of some value to dryer regions, such as ours, in Southern Queensland. Faecal seeding is an option for plant propagation, particularly for species with hard or dormant seeds like pasture seeds. This process simulates natural scarification, where the seed coat is softened or partially broken down by stomach acids and enzymes, making it easier for the seed to germinate. When mixed with loose lick or supplements, the seeds are consumed by livestock, and undigested seed passes through the animal into cowpats on the ground, spread over the paddock wherever cattle travel and camp.

Faecal seeding is a great method for restoring grazable paddocks. The most effective seeds for this process are seeds that have a dormant process or those who have hard seeds that will withstand the digestion process. These seeds include Legumes and Grasses such as lucerne, Desmanthus, and medics.

Faecal seeding capitalizes on the natural digestive processes of animals to improve seed germination and promote healthy pasture growth. Trials, including a 2021 trial in Wandoan, found that the cost of faecal seeding, counting monetary costs as well as investment of time, is significantly less than traditional seeding methods. This is countered with faecal seeding being a less reliable method than traditional methods. This method of seeding will see a sporadic, less evenly dispersed seeding. Those who use this method will most likely find that the seeds are more concentrated around areas where cattle drink, feed, and camp. The ease of this method combined with the cost effectiveness could make it a great option for your grazing.

It is a worthwhile consideration for seeding in our region. If you want to know more about this method of seeding and the best seed options, contact our Agronomists to have a chat about the best options for you.

Pasture Seeds

Tara Rural Supplies and Condamine Seeds and Tyres offer a range of seed options for your pastures this summer. Some great options include a great selection of Rhodes Grass as well as Panic, Sabi, Bambatsi, and more. This includes mixes for specific purposes such as horse mixes and others.

Legumes are also a great option that not only act as a great forage but can also help in nitrogen fixation in your soil. For legumes, it is worth considering clover, lucerne, and desmanthus. In addition to legumes, we also have Cowpea and Lab Lab available.

Give us a call and talk to Andy (our agronomist) about the best options for your grazing needs.

Growing Competition
Tara Show Society and Tara Rural Supplies once again bring you the Tara Show GIANT pumpkin, cucumber and sunflower competitions. Get your seeds at Tara Rural Supplies or call (07) 4665 3366

Grain Protection

Tablets

Blankets

Liquid

We carry Fumaphos in Tablet form available in two sizes of this reliable product. These tablets are sold in 300g or 1.5kg. The tablets react with air and release phosphide gas penetrating through the grain to kill eggs, larvae, and adult pests. The Fumaphos tablets are used for fumigation of silos, ships, or warehouses.

Active Ingredient:
Phosphine as Aluminium Phosphide

Fumaphos blankets are a new product for Tara Rural Supplies and Condamine Seeds and Tyres. They will be available in the coming months. These blankets are an easy method of ensuring grain is free of residue after fumigation. They are for fumigation of silos, ships or warehouses. The blankets consist of a powdered formulation with 56% Aluminium Phosphide in strings made from porous Tyvec bags.

Active Ingredient:
Phosphine as Aluminium Phosphide.

For the control of insect pests in stored grain (except rice and malting barley) and lupins; and on surfaces of buildings and equipment as specified in the directions for Use table.

Diplomat 500[®] is a liquid grain protection available at Tara Rural Supplies and Condamine Seeds and Tyres. We have this available in 1ltr and 10ltr. Diplomat 500 is applied as a spray and is best used with D-Ploy[®].

Active Ingredient:
Chlorpyrifos-Methyl

D-Ploy[®] is another options for liquid grain protection.

D-Ploy[®] is for mixing with uninfested grain to provide an effective residual for keeping your grain safe from insect pests.

D-Ploy[®] is best used in conjunction with Diplomat 500[®] in order to protect against any live pests along with the residual protection of D-Ploy[®].

Active ingredients: Piperonyl Butoxide, Deltamethrin & Liquid Hydrocarbon.

**October 10th-13th
Condamine, QLD**

Tara Rural Supplies and Condamine Seeds & Tyres

Is proud to Sponsor the Condamine Bell Campdraft.

Come along for a great weekend. If you are participating check out our on-site store. Give us a call at (07) 4627 7222 to pre-order your hay to be delivered to your site.
